OLI Systems is a Start-Up working on blockchain-based distributed energy management solutions since 2016. OLI boxes and gateways can connect to each other via blockchains based on Ethereum technology forming local energy networks. We are an active member of the Energy Web Foundation and one of the first validators of the newly launched Energy Web Chain. Currently, OLI technology is used in applications of several energy suppliers and grid operators in Germany. Further information can be found at www.my-oli.com.

For our Stuttgart-based team we a currently looking for a student to write her/his

Master Thesis
A sustainability token system for incentivizing efficient and emission-free customer behavior

Your tasks:

- Research on existing reward schemes, both with and without blockchains
- Conceptual development of a sustainability token system
- Feasibility assessment together with our blockchain development team

Your profile:

- Bachelor's degree / current enrolment for a Master's degree in (Energy) Economics or any related discipline
- Experience with incentivation and reward schemes
- Ideally a first encounter with blockchain technology
- Independent, output-oriented, careful and creative
- Solid command of the German or English language (B2 and above)

A compensation fee will be paid – duration according to individual university regulations.
